

TinyPerle is a range of 4 spotlights specially designed to simplify window lighting design and make the light source almost invisible.

TinyPerle is available in four 24VDC versions offering output lumens from 60 to 215 lumens, with CRI 96-98 depending on the colorimetry.

Perle 1 and 2 HD offer variable focal lengths and feature quartz/glass lens groups made by a German optician, Perle 2 has a fixed focal length.

These three models can receive two types of filters, intended to modify their native angle, soften the contours of the flow, and/or to modify their colorimetry. Gamma has a fixed focal length of 35° or 50°.

Different types of supports allow their easy integration: magnetic rail, surface-mounted or recessed support.
